## Architectural Design in Software Engineering - Computer Notes

Introduction: The software needs the architectural design to represents the design of software. IEEE defines architectural design as "the process of defining a collection of hardware and software components and their interfaces to establish the framework for the development of a computer system.". The software that is built for computer-based systems can exhibit one of these many architectural styles.

distinct phases: Software Architecture and Software Design. In Architecture, nonfunctional decisions are cast and separated by the functional requirements. In Design, functional requirements are accomplished. Software Architecture. Architecture serves as a blueprint for a system. It provides an abstraction to manage the system complexity and establish a communication and coordination mechanism among components.

Software Architecture & Design Introduction - Tutorialspoint  
The software architecture focuses on the role of software components. Software components consist of a simple program module or an object oriented class in an architectural design. The architecture design extended and it consists of

structures and systems. Each structure comprises software elements, relations among them, and properties of both elements and relations. The architecture of a software system is a metaphor, analogous to the architecture of a building. It functions as a blueprint for the system and the developing project, laying out the tasks necessary to be executed by the design teams. Software ar
