Money in Asia examines two chronic problems that faced early modern monetary economies in East, South, and Southeast Asia: The inability to provide sufficient amounts of small currencies to facilitate local economic transactions and to control currency depreciation.

Two experts in monetary policy offer a unified framework for studying the role of money and liquid assets in the economy. In Money, Payments, and Liquidity, Ed Nosal and Guillaume Rocheteau provide a comprehensive investigation into the economics of money and payments by explicitly modeling trading frictions between agents. Adopting the search-theoretic approach pioneered by Nobuhiro Kiyotaki and Randall Wright, Nosal and Rocheteau provide a logically coherent dynamic framework to examine the frictions in the economy that make money and liquid assets play a useful role in trade. They discuss the implications of such frictions for the suitable properties of a medium of exchange, monetary policy, the cost of inflation, the inflation-output trade-off, the coexistence of money, credit, and higher return assets, settlement, and liquidity. After presenting the basic environment used throughout the book, Nosal and Rocheteau examine pure credit and pure monetary economies, and discuss the role of money, different pricing mechanisms, and the properties of money. In subsequent chapters they study monetary policy, the Friedman rule in particular, and the relationship between inflation and output under different information structures; economies where monetary exchange coexists with credit transactions; the coexistence of money and other assets such as another currency, capital, and bonds; and a continuous-time version of the model that describes over-the-counter markets and different dimensions of liquidity (bid-ask spreads, trade volume, trading delays).
