Discrete Signals

Systems

Continuous signals are represented within parenthesis. (figure describe continuous system) Discrete systems. In discrete systems, both input and output signals are discrete signals. The variables in the discrete systems vary with time. In this type of system,

Discrete Signals

A signal is said to be continuous when it is defined for all instants of time. A signal is said to be discrete when it is defined at only discrete instants of time/

Deterministic and Non-deterministic Signals A

signal is said to be deterministic if there is no uncertainty with respect to its value at any instant of time.
