PART PART is a rule system that creates pruned C4.5 decision trees for the data set and extracts rules and those instances that are covered by the rules are removed from the training data. The process is repeated until all instances are covered by extracted rules. The following recipe demonstrates the PART rule system method on the iris dataset.

Non-Linear Classification in R with Decision Trees

C 4 carbon fixation or the Hatch–Slack pathway is one of three known photosynthetic processes of carbon fixation. It owes the names to the discovery by Marshall Davidson Hatch and Charles Roger Slack that some plants, when supplied with ^{14}C , incorporate the ^{14}C label into four-carbon molecules first. C 4 fixation is an addition to the ancestral and more common C 3 carbon fixation.

C4 carbon fixation - Wikipedia

C4.5 converts the trained trees (i.e. the output of the ID3 algorithm) into sets of if-then rules. This accuracy of each rule is then evaluated to determine the order

String Trees - STRINGS DIRECT LIMITED

These C4 plants are well adapted to (and likely to be found in) habitats with high daytime temperatures intense sunlight. Some examples: crabgrass corn (maize) sugarcane sorghum. Although only ~3% of the angiosperms, C4 plants are responsible for ~25% of all the photosynthesis on land. C4 cells in C3 plants
