## Portfolio Theory Of Information Retrieval

Thank you very much for downloading **portfolio theory of information retrieval**. Maybe you have knowledge that, people have look hundreds times for their favorite novels like this portfolio theory of information retrieval, but end up in infectious downloads.

Rather than enjoying a good book with a cup of coffee in the afternoon, instead they are facing with some harmful virus inside their

desktop computer.

portfolio theory of information retrieval is available in our digital library an online access to it is set as public so you can download it instantly.

Our books collection saves in multiple countries, allowing you to get the most less latency time to download any of our books like this one.

Kindly say, the portfolio theory of information retrieval is universally compatible with any devices to read

Portfolio Theory in IR (2) Weight  $w_i$  is similar to the discount factors that have been applied to IR evaluation in order to penalize late-retrieved relevant documents [Järvelin and Kekäläinen(2002)] It can be easily shown that when  $w_1 > w_2 \dots > w_n$ , the maximum value of  $R_n$  gives the ranking order  $r_1 > r_2 \dots > r_n$  This follows immediately that maximizing  $R$  - by which the document with highest relevance score is retrieved first, the document with next highest is retrieved second, etc ...

## *Portfolio Theory of Information Retrieval*

In general, the process of retrieving information consists of two phases. In the first phase, probabilistic retrieval models [1] compute the relevance between a given user's information need (query) and each of the documents in a collection. The second phase focuses on how to rank the calculated documents; the classic Probability Ranking Principle (PRP) [2] forms the theoretical basis of this phase, which ranks the documents with the order of decreasing probabilities of relevance to ...

*Post-Modern Portfolio Theory for Information Retrieval ...*

Recently, modern portfolio theory has been applied to modelling the uncertainty and correlation between documents in information retrieval. Given a query, the aim is to maximize the overall relevance of a ranked list of documents and at the same time minimize the overall uncertainty of the ranked list.
