Suggested level: senior secondary.

One of the most important and consistent voices in the reform of science education over the last thirty years has been that of Peter Fensham. His vision of a democratic and socially responsible science education for all has inspired change in schools and colleges throughout the world. Often moving against the tide, Fensham travelled the world to promote his radical ideology. He was appointed Australia's first Professor of Science Education, and was later made a Member of the Order of Australia in recognition of his work in this new and emerging field of study. In this unique book, leading science educators from around the world examine and discuss Fensham's key ideas. Each describes how his arguments, proposals and recommendations have affected their own practice, and extend and modify his message in light of current issues and trends in science education. The result is a vision for the future of science teaching internationally. Academics, researchers and practitioners in science education around the world will find this book a fascinating insight into the life and work of one of the foremost pioneers in science education. The book will also make inspiring reading for postgraduate students of science education.

Reissuing works originally published between 1971 and 1994, this collection includes books which offer a broad spectrum of views on curriculum, both within individual schools and the wider issues around curriculum development, reform and implementation. Some cover the debate surrounding the establishment of the national curriculum in the UK while others are a more international in scope. Many of these books go beyond theory to discuss practical issues of real curriculum changes at primary or secondary level. The Set includes books on cross-curricular topics such as citizenship and environment, and also guidance, careers, life skills and pastoral care in schools. A fantastic collection of education history with much still relevant today.

Suggested level: senior secondary.

Chemical Education in the Seventies discusses the major innovations and programs in chemical education from various countries. The book provides a discourse regarding the aspects of chemistry curriculum of primary, secondary, and college level, which includes laboratory work, examination reforms, and training of teachers. The text also discusses information regarding interactions between chemistry and society, such as contributions made by the chemical industry for the education of students at the primary, secondary, and tertiary levels. The selection will appeal to a wide variety of readers, particularly to teachers of general science and chemistry in industrialized and developing countries.
